SECTION 1

INTRODUCTION

INTRODUCTION

The information presented in this statistical report summarizes data collected during the summer months of the 1984 park operating season as part of the on-going provincial park User Survey Program. This program was established in 1974 to provide current information for a variety of planning, research and operational/management functions. The program operates on a five year cyclical pattern during which time eligible parks are surveyed once. This approach permits a response each year to changing needs for user information and ensures that data for any given park are never more than five years old. The database is now sufficient to provide a reliable record of trends and patterns of park users on a provincial and regional basis.

Questions contained in the survey obtained information on the characteristics of campers including: the extent of park usage, travel data, activity participation, trip-related expenditures, marketing information and park perception. In addition, a number of park-specific questions were added to investigate particular issues of concerns of the park manager (see Appendix for copy of Questionnaire).

A total of 4006 Questionnaires were processed and form the basis for the sample of park campers. The sample size for each of the surveyed parks is:

Park	Return Rate %	Sample Size	Percent of Total Sample
Algonquin	44	400	10
